What'sTheMove?

Team Members:
Brendon
Ben
Christian
Kevin

Project Description:

What'sTheMove?

Users are given two buttons:

-Specific Location-   -Find me a location-

…..From the specific location option, the user is taken to a page that allows for a few drop down options:

State:
City:
Jobs: (can be specific or general).
Weather:(50-60, 60-70, 70-80, 80-90, 50-90, They set the range).
Housing prices:(can be specific or general).
Gas prices:(can be specific or general).

These results return the ideal

…..From the find me a location option, the user is taken to a page that allows for a few drop down options:

Jobs: (can be specific or general).
My Income: (By Range ex: $0-30,000)
Weather:(50-60, 60-70, 70-80, 80-90, 80-90, They set the range).
Housing prices:(can be specific or general).
Rent prices:(can be specific or general).

These results return a location with the best matches.

APIs to be used:
Zillow
GoogleMaps
WeeklyWeather

Tasks going forward:

To start (getting the skeleton):
Frontend: Brendon & Kevin
Backend: Ben & Christian

After the skeleton of each is completed we will delegate logic points between group members.
